# FUTURE IS IN THE AIR

OneAir **was founded in Verona in 2016**, from the desire to realize the twenty-year experience of its partners in the air diffusion systems sector.

The meeting of **different skills**, coming from the design, construction and marketing of systems and components, has made it possible to develop from the beginning an **approach oriented to the research** and development of innovative and improved solutions compared to what was already on the market.

This is how, in just a few years, we have **distinguished ourselves in Italy and abroad** with our textile, metal and technopolymer air diffusers, and with a range of products with the exclusive OneAir patent.

Our added value? Thanks to an **expert team** and the **technology at our disposal**, we handle not only the **design phase** but also the **production phase** internally. In this way, we can start from the customer's needs to propose **tailor-made systems** for each project.

**Consulting** and **innovation**, to offer maximum well-being: in the civil and industrial fields.

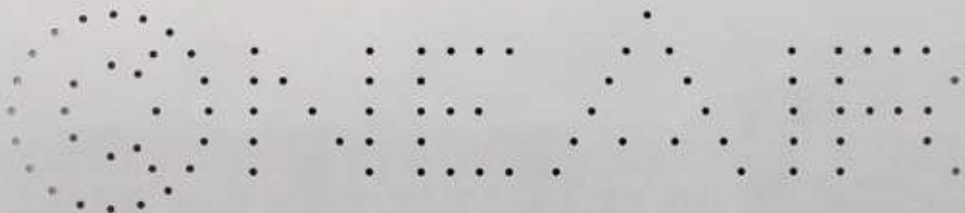

# OUR MISSION

To provide comfort and well-being to people, driving the future of air diffusion system design and manufacture.

# OUR VISION

To innovate and spread well-being among people.

# THE VALUES THAT DISTINGUISH US

In order to find the best solution, and to fully satisfy the customer's needs, it is necessary to have solid foundations. Both the technical ones and the value ones. These are the principles that characterize us and that we try to bring daily into our business.

A united team, a ready to welcome the customer, with his needs and requests, to provide an effective response that fully meets his needs. Elements that are fundamental for us, to create stable relationships of trust with those who choose to rely on OneAir every day.

**CONSULTANCY.** We do not provide standard products, but customized solutions.

**INNOVATION.** We are always looking for innovative, efficient and sustainable solutions.

**CONTINUOUS IMPROVEMENT.** In an evolving world, we want to keep growing and improving. Day by day.

**SYNERGY.** We believe that teamwork is essential to overcome any small or big challenge.

**SUPPORT.** We support our customers at every stage of their purchasing journey.

# OUR PATH

## 2016

### **OneAir is born**

A new reality, developed from the twenty-year experience of its partners in the air diffusion systems sector.

### **DHI Textile**

#### ***Lightness and practicality***

Textile ducts are the ideal solution for contexts that require a material that is both light and resistant. These features allow for quick and easy installation, making the product perfect in case of frequent maintenance and washing operations. OneAir is one of the few companies in the world to perform fabric cutting with a laser machine, which benefits the quality of the workmanship.

### **DHI Metal**

#### ***Aesthetics and silentness***

The high induction steel ducts are able to combine an optimal diffusion of air in the environment with a high-level design, which integrates perfectly into any context. The silentness of these diffusers, even under maximum operating conditions, makes them the first choice for designers and clients. Thanks to our latest generation machinery, we obtain a high quality of product realization without sacrificing flexibility and speed in manufacturing.

# 2017

## Railway sector

The characteristics of the fabric duct make the product ideal for air distribution on railway carriages. Thanks to the team's professionalism, we are chosen for important ongoing projects for high-speed trains, for the modernization of regional railway lines, at national and European level, and for the study of special components and interior accessories.

## DHI Plastic

### *Design and innovation*

The acquisition of an innovative machine and the experience gained in the manufacture of metal and textile diffusers led us to develop an original and new product. The micro-perforated technopolymer ducts combine functionality and innovation, offering a versatile and lightweight solution. DHI Plastic is an exclusive OneAir patent and is also available in the Light version, a system with internal LED lights that integrates lighting and air conditioning, making the product a unique novelty on the market and the ideal choice for environments where design has particular importance.

**2018**

## VARI-D

### *The evolution of comfort*

The desire to bring our expertise and enthusiasm for innovation to the market led us to develop an engineered product of the latest technology. This patented system allows to manage air diffusion intelligently, thanks to its ability to vary air flow rate and speed. It therefore provides a high and dedicated level of comfort for specific needs and particular project configurations, guaranteeing significant energy savings.

## Openness to electronic development

In order to evolve and improve the Vari-D system more and more, we develop the electronics for controlling this product using proprietary software. This new implementation expands the possibilities of use of this patented technology, allowing the user to read and control functional parameters even remotely, as well as integration into PLC systems already in use by the customer. This development thus becomes for OneAir an opening towards other areas and paths, an opportunity to expand know-how and generate new ideas.

# 2019

## ONE-SBS

### *Fire and smoke barriers*

We study and propose on the market a textile system designed for smoke compartmentalization, as required by UNI 9494-1. ONE-SBS static barriers are a light, practical and economical solution, able to easily adapt to all environments. The product is CE marked, having passed the tests required by UNI EN 1634-3 and UNI EN 1363-1, and has obtained the DA-240 Classification thanks to the excellent performance achieved.

## OneAir Innovative SME

I The title, issued jointly by the Italian Chambers of Commerce and the Ministry of Economic Development, recognizes the innovative character of specific companies on the national territory.

## Purchase of first company plant

With the purchase of the building in which the company already operates, the production and office spaces are reorganized and modernized, allowing OneAir's production capacity to be consolidated. An important investment for the company's future.

# 2020

## **Team and office expansion**

The company's continuous growth led to the need to hire new staff and expand the space dedicated to the technical department, the research and development of new products and the sales area for the Italian and foreign markets, flanked by a new marketing strategy.

## **Study and production of anti-COVID masks**

From the desire to reinvent in a difficult situation, and make our own contribution to people's safety, for a few months the activity of the internal textile laboratory was converted to produce as many masks as possible.

## **New 3D CAD Software system**

Looking to the future, we purchase a new tool for the design of systems that allows better product engineering and more careful space management.

## **Legality rating**

OneAir receives the legality rating from AGCM, a synthetic indicator of compliance with high standards of legality for companies that apply for it.

# 2021

## **Opening of new foreign markets**

The strengthening of the sales team leads to a renewed push towards foreign markets and an increased ability to bring OneAir solutions worldwide.

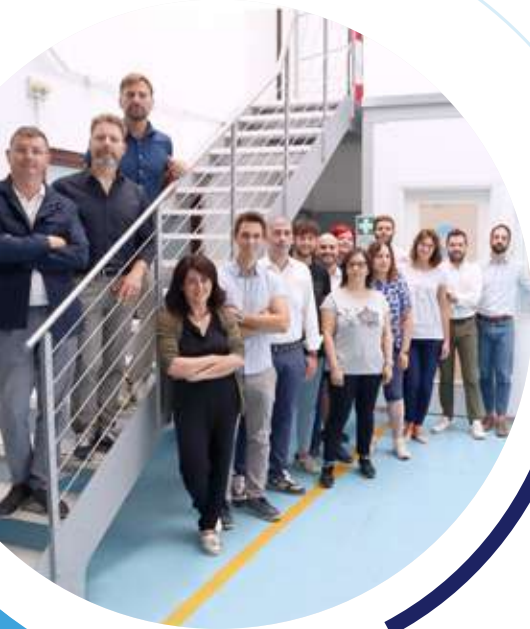

## **Purchase of new 4.0 machinery**

Equipment that allows to further increase the company's production capacity, using the new 4.0 ready technology for metal, fabric and technopolymer processing, which integrates advanced 3D design in order to obtain more advanced products.

## **5,000 realizations**

We are a young company with twenty years of experience, and our growth is the result of the team's shared work and the combination of our skills and ability to innovate, contributing to the continuous improvement of our products. Reaching this milestone is the proof of OneAir's constant and rapid expansion and, at the same time, an incentive to strengthen our potential even further.

**2022**

### **Purchase of second plant**

Doubling its square footage, with the purchase of the new plant adjacent to the Verona headquarters, the company's desire to invest in the internal development of design and production skills and competences continues. The second plant sees an additional production line, new exhibition spaces, research and development laboratories and new staff.

### **New ONEAIR DIFFUSION domain**

Moving towards an increasingly international focus, ONEAIR DIFFUSION confirms the strong desire to offer products with a brand recognized for quality and efficiency, worldwide.

# SOLIDITY AND INNOVATION, FOR MAXIMUM COMFORT

OneAir is always careful to innovate and renew its solutions, dedicating time and resources to propose cutting-edge systems, but also to grow in terms of company solidity.

Each step, over the years, has been taken for providing an excellent service, both in terms of design and internal production.

Experience, innovation and continuous improvement are the elements that allow us to overcome challenges and achieve our goals every day.

# PRODUCTS AND APPLICATIONS

Some examples of air diffusion systems that we have realized for customers in different sectors, and customized according to their needs.

## **VARI-D** MULTIFUNCTIONAL AREAS, PRECISION INDUSTRY AND OPEN SPACE OFFICES

This patented system uses the innovation of its various integrated functions to manage and optimize particular environments, characterized by great heights and dimensions that require high environmental comfort (for example precision laboratories, multi-purpose areas or large open space offices).

## **DHI TEXTILE**

### **WAREHOUSES, INDUSTRY AND PRODUCTION AREAS**

For large industrial storage and production areas, including foodstuffs, microperforated fabric ducts meet the need for a light but resistant material, suitable for the possible need for frequent maintenance, washing or sanitization. This product is in fact easily washable and safely installable: fundamental characteristics to become the first choice in environments subject to strict health regulations.

## **DHI PLASTIC** **SHOWROOMS,** **RESTAURANTS, SCHOOLS,** **SWIMMING POOLS AND** **FITNESS CENTERS**

The versatility and degree of customization of the technopolymer diffusers make it possible to meet all the aesthetic and technical needs that could require architecturally sophisticated environments such as restaurants, swimming pools or showrooms. With this solution, the duct can completely replace the lighting system thanks to the integrated LED, making the product exclusive and innovative.

## **DHI METAL** **SHOPS, SUPERMARKETS AND LARGE** **DISTRIBUTION AREAS**

Thanks to the numerous finishes available, the microperforated metal duct is an aesthetically pleasing product and therefore a furnishing element that is fully integrated into the environment in which it is installed. An accurate study of the technical characteristics and a precise calibration of the perforation also guarantee a silent air diffusion and avoid the presence of condensation on the surface of the duct.
